

Thursday August 8 (Pamplin 2030)

4:30-6:00pm M-S testing break-out groups

Team 1: Krijthe (+ two other participants)

Team 2: Livengood (+ two other participants)

Team 3: Pek (+ two other participants)

Team 4: Zaharatos (+ two other participants)

Team 5: Gong (+ two other participants)

The team leaders will be responsible for installing a statistical software program on a computer that can perform linear regression; there are many such programs free, including Excel, but the easiest to use is MINITAB which you can download for free and use it up to a month.

Brian Dorazio can help at all stages of the empirical exercise.
